                The II-13 binding protein and related therapeutic molecules can be used in the antagonism of at least one II-13 activity. They can be used for treating II-13 mediated conditions such as certain allergic conditions such as asthma or to inactivate locally administered II-13 after II-13 treatment. The products can also be used as diagnostic agents, e.g. for detecting autoimmune diseases. The antibodies can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1159

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AA909507.1
/note=Torgan: pooled; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI_GGAP_GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. ciones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento

polylinker; Site_1: Not I; Site_2: EoR; The UI-R-C3
library is a subtracted library of a series, ultimately
derived from a mixture of individually tagged normalized
libraries from rat placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, muscle, and 8, 12 and 18-day
embryos, after a series of subtractions to reduce the
representation of cDNAs from which ESTs had already been
generated. The following serially subtracted libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Soares, MB

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton oroject grant. The DNA was prepared from embryos by Alain Bucheton

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               966
                                                                                                                                                                                                                                                              Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 acconstructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pland EST libraries. A more detailed description of the library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TRKRWGAWWRADAWARDDTDGKDTRTADKDRKR 1058

                                                                                                                DNA encoding animal haemopoietin receptor which interacts with interleukin-13 - useful to treat asthma, allergy or condition exacerbated by IgE production

Claim 5; Page 52-54; 93pp; English.

Novel mouse and human haemoprotein receptors (W09821 and W09822),

designated NR4, comprise the interleukin-13 (IL-13) receptor alpha-chain. The human NR4 amino acid sequence was deduced from a composite DNA sequence (T66165) derived from bone marrow cDNA clones. Recombinant NR4, or fusion proteins including NR4, can be produced in transformed host cells. The receptor molecules and their components are useful in the development of a range of
                    agonists, antagonists, therapeutics and diagnostic reagents based on ligand interaction with its receptor, esp. for the development of cpds. capable of modulating the activity of II-13 and related cytokines such as interleukin-4 for the treatment of allergy, asthma
                                                                                                                                                                                                                                                                                                                                                                                              N-PSDB; T66165
                                                                                                                                                                                                                                                                                                                                                                                                                                         Hilton DJ

            The inventors claim: an isolated cDNA sequence encoding murine (secretory) interleukin-5 (II-5) receptor, which is synthesised from murine early B cell mRNA; an isolated murine (secretory) II-5 receptor; an isolated cDNA sequence encoding human (secretory) II-5 receptor, which is synthesised from mRNA of human peripheral blood eosinophil; and an isolated human (secretory) II-5 receptor. Also claimed are a COS monkey cell transfected with a recombinant vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  receptor; an isolated cDNA sequence encoding human (secretory) II-5 receptor, which is synthesised from mRNA of human peripheral blood eosinophil; and an isolated human (secretory) II-5 receptor. Also claimed are a COS monkey cell transfected with a recombinant vector contg. the DNA; secretory human II-5 lacking a cytoplasmic and a transmembrane region; and an expression vector.

isecretory) interleukin-5 (IL-5) receptor, which is synthesised from murine early B cell mRNA; an isolated murine (secretory) IL-5 receptor; an isolated cDNA sequence encoding human (secretory) IL-5 receptor, which is synthesised from mRNA of human peripheral blood eosinophil; and an isolated human (secretory) IL-5 receptor. Also claimed are a COS monkey cell transfected with a recombinant vector contg. the DNA; secretory human IL-5 lacking a cytoplasmic and a sequence 398 AA;

                                                                                                              testis tissue obtained from a Celebus macaque. The resulting polypeptide is a receptor for cytokines (particularly interleukin-13) and is expressed on the surface of testicular cells, probably being involved in spermatogenesis. It can be used to detect ligands promoting proliferation and/or differentiation of such cells in cultures and may also be used to treat infertility. Antagonists of this receptor may be used to characterise ligand-receptor interactions and as male-specific contraceptives. By blocking the action of II-13, receptor antagonists and ligand-binding this receptor can also be used to modulate immune function, e.g. in allergy and asthma, as a diagnostic to determine circulating levels of ligand and also to isolate and purify ligands.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-MAR-1998 (first entry)
Celebus macaque Ecytor2 protein.
Cytokine receptor; ligand binding; testicular cell; spermatogenesis;
infertility; antagonist; contraceptive; diagnostic; therapeutic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid encoding testis-specific cytokine receptor for identification of ligands or antagonists, potentially for male contraceptives or for infertility treatment Example 4: Page 56-57; 79pp; English.

                       encoding it, for treatment of interleukin-5 mediated disorders such as chronic asthma
Claim 7; Fig 1; 15pp; English.
This maino acid sequence was deduced from the nucleotide sequence,
Excluted as detailed in Q25790. The cytoplasmic domain is 58 amino
acids long. A domain implicated in signal transduction processes
can not be found in this short cytoplasmic tail. Recombinant IL-5
alpha chain can be used as an IL-5 antagonist in chronic asthma or
other disease states with demonstrated esosinophilia. It may also be
used either alone or with the beta chain of the whole IL-5 receptor
                                                                                                                                                                                                (HOFF) HOWEMANN LA ROCHE'S Devos R, Fiers W, Plaetinck WPI; 92-218502/27.

        The present sequence represents the human interleukin-13 (IL-13) binding chain of the interleukin-13 receptor, designated IL-13bc. IL-13bc acts a mediator of the known biological activities of IL-13. Recombinant IL-13bc proteins, and antibodies raised against them, are used to inhibit the binding of IL-13 to its receptor. They are particularly used to treat IgE-mediated conditions, e.g. allergy, asthma and immune complex disorders, especially lupus, nephritis, thyroiditis and Grave's disease. They are also used to treat immune deficiency (particularly in haematopoietic progenitor cells), cancer etc., and to increase macrophage activation, e.g. in vaccination. To potentiate IL-13 activity, a protein with such activity is combined with IL-13bc and the mixture applied, in vivo, to a cell expressing at least one chain of the IL-13 receptor other than IL-13bc. IL-13bc can also be used in diagnosis to detect expression of IL-13b. its receptor or binding chain, and to raise specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                27-MAR-1998 (first entry)

                                          New nucleic acid encoding testis-specific cytokine receptor - useful for identification of ligands or antagonists, potentially for use as male contraceptives or for infertility treatment claim 2; Page 47-48; 79pp; English.

This sequence represents a novel ligand-binding receptor, Zcytor2, which shares homology with cytokine receptors and was isolated from placental polyA+ RNA. The resulting polypeptide is a receptor for cytokines (particularly interleukin-13) and is expressed on the surfort testicular cells, probably being involved in spermatogenesis. It

By blocking the action of IL-13, receptor antagonists and ligand-binding this receptor can also be used to modulate immune function, e.g. in allergy and asthma, as a diagnostic to determine circulating levels of ligand and also to isolate and purify ligands. Antibodies can be used to assay circulating receptor (an abnormal level may be indicative of disease such as cancer), for labelling cells that express the receptor,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This protein comprises a novel human cytokine/peptide hormone receptor, designated HR-1 receptor. The amino acid sequence was dediced ifrom a cDNA clone (see V04075) isolated from a human testis cDNA ilbrary. It shows 27% amino acid identity and 52% similarity with the human interleukin-5 receptor. Also claimed are polynuclectides encoding HR-1 receptor, vector and host cells, an agonist to the polypeptide, antibody against the polypeptide, an integral to disease, or a susceptibility to disease, related to expression of HR-1 receptor, and a method for identifying compounds that activate or inhibit the HR-1 receptor. HR-1 receptor protein and polynucleotides can be used for research, biological, diagnosis and (gene) therapy applications, e.g. to increase resistance to infections in individuals with trauma and/or burns, and to prevent, ameliorate, treat, diagnose and/or determine protein neutropaenia or as a consequence of cytotoxic therapy of cyclic neutropaenia or as a consequence of cytotoxic therapy of Schuence, 380 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC invention relates to new purified peptides comprising 380 or 427 amino CC and 427 as proteins are designated II-13R beta and alpha respectively. CC affinity, but acquires high affinity for II-13 while II-13R beta has high affinity for II-13 while II-13R has low CC receptor. Nucleic acids encoding II-13R beta and alpha are used as CC diagnostic probes to identify aberrant synthesis or genetic anomalies such as loss of heterozygosity and rearrangements, or chromosomal CC anomalies. They are also used for production of recombinant II-13R beta and alpha which can be used as II-13 antagonists, specifically to CC allergy. II-13 receptors are also useful as antisense molecules for gene CC allergy. II-13 receptors are also useful as antisense molecules for gene CC immunoassays) to diagnose diseases associated with abnormal expression CC of II-13 receptors; when coupled to a toxin also for treatment of used to identify ligands and modulators of II-13R. Nat the surface are cused to identify ligands and modulators of II-13R. Nat the surface are is sencoded by the nucleic acid sequence shown in Figure 2a in the CC sequence listing (T85828).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

Nucleic acid sequence encoding human cytokine peptide hormone receptor - useful to treat, prevent or diagnose, e.g. lowered resistance to infection, asthma, allergy or haematopoietic disease claim 13; Page 62-64; 76pp; English.
                                                                                                           compounds which bind to, and activate or inhibit, it. HR-1 receptor activators and agonists can be seed to treat, prevent or diagnose predisposition to lowered resistance to infection, asthma allergic or haematopoletic disorders, e.g. where induced by AIDS, applastic anaemia, neutropaemia or cytotoxic treatments for cancer
                                                                                                                                                                                                         and 52% similarity to the interleukin-5 receptor. Its amino acid sequence was deduced from a cDNA clone (see V04131) obtained from a human testis library. Recombinant HR-1 receptor can be expressed in claimed host cells, and used in a claimed method for identifying compounds which bind to, and activate or inhibit, it. HR-1
              HR-1 antagonists, e.g. antibodies of HR-1 receptor fragments, can be used to treat conditions associated with HR-1 receptor overexpression. The antibodies can also be used to determine HR-1 receptor levels, since overexpression may be diagnostic of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO9747741-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
